Project Requirements

Use at least two APIs.

Use AJAX to pull data.

Use at least one new library or technology that we haven't discussed.

Create a polished front end/UI .

Meet good quality coding standards (indentation, scoping, naming, etc.).

Do NOT use alerts, confirms, or prompts (look into *modals*).

Incorporate some sort of repeating element (table, columns, etc.).

Use Bootstrap or an alternative CSS framework.
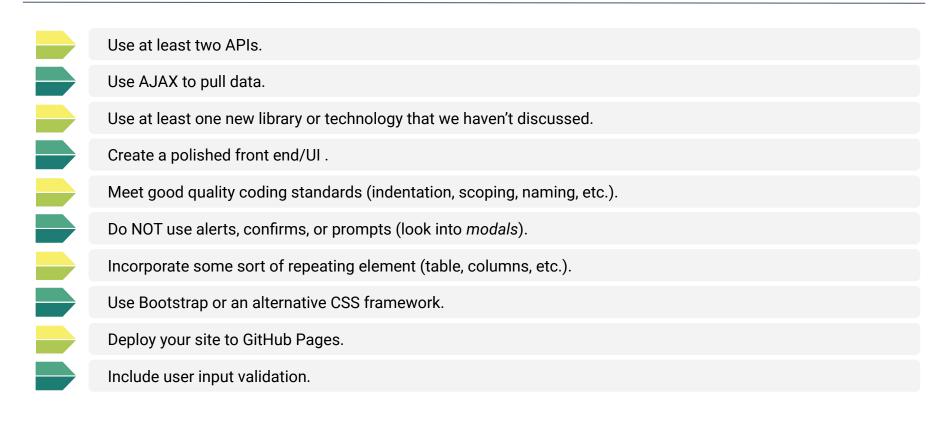

Deploy your site to GitHub Pages.

Include user input validation.

Bonus

Utilize Firebase for persistent data storage.

Make your site mobile responsive.

Use an alternative CSS framework such as Materialize.

Presentation Requirements

You will be responsible for preparing a formal, 10-minute presentation that covers the following:

- The overall concept of your application

- Your motivation for developing the application

- Your design process

- Technologies used (and a brief description of how they work)

- A demonstration of the application's functionality

- Directions for future development

- Treat the presentation seriously!

- Sometimes, talking intelligently about tech > doing tech.
